

Space Utilization Study

After considering proposals from architectural and engineering firms with home offices from Bangor, ME to Los Angeles, CA, the district Facilities Committee recommended to the Board that they hire Harriman, of Auburn and Portland (www.harriman.com) to complete the space utilization study and make recommendations to the Board for future facilities use. We must undertake this study to develop options for renovating/upgrading existing facilities, constructing new facilities, or restructuring our current structure. As with the Strategic Planning process, community input will be a critical component of this study. You can stay apprised of our progress, and opportunities for involvement, by checking our website (www.rsu21.net) on a regular basis.
